BASKET · DESIGN SYSTEM

Theme Reference

Everything the app's look is made of — colour, type, shape, components and motion — with the Flutter file each token lives in. Three files, one package.

FILES	MODES	ACCENT
app_colors · app_theme · app_motion	Light + dark	Per shop, user-chosen

01 — SETUP

Wiring it up

Drop the three files into `lib/theme/` and point `MaterialApp` at them. Nothing else needs configuring — every widget below is styled by the theme, so screens contain layout, not styling.

```
// lib/main.dart
import 'theme/app_theme.dart';

MaterialApp(
  title: 'Basket',
  theme: AppTheme.light,
  darkTheme: AppTheme.dark,
  themeMode: ThemeMode.system,
  home: const SplashScreen(),
);
```

02 — COLOUR

Ink on paper, accented by shop

The chrome is deliberately colourless: near-black ink on warm off-white. All colour in the interface belongs to a *shop*, and every shop's colour is chosen by the user — so the palette below names no retailer.

Light mode

bgLight	surfaceLight	subtleLight	selectedRow	ink	destructive
#FAFAF8	#FFFFFF	#F5F5F2	#F1F0EB	#1A1A18	#C0392B

Dark mode

bgDark	surfaceDark	subtleDark	selectedRow	success	undoAccent
#151513	#1E1E1C	#212120	#262624	#2E9E5B	#F0A868

Preset shop swatches

The eight the picker offers when a user creates or edits a shop. Order matters — the first is the default suggestion. They are also reused, by hash, as household member avatar colours.

#2456A6 #E8791A #C0392B #2E9E5B #8E5CD9 #D9A62E #1F9AA0 #CB5B9E

Text & line opacities

TOKEN	OPACITY	USED FOR
`textPrimary`	100%	Product names, titles, values
`textSecondary`	55%	Descriptions, sheet body copy
`textMuted`	40%	Captions, quantities, placeholders, eyebrows
`textFaint`	32%	Disabled and inactive-only labels
`border`	10% / 16%	Card and input outlines
`divider`	7% / 8%	Row separators

Checked product rows drop to **45% whole-row opacity** rather than recolouring their parts — one property to animate, and the shop dot desaturates with it.

03 — SHOP ACCENTS

One theme, re-seeded per shop

Scope the shop's colour to its own subtree. The chrome must not move when the user swipes between tabs — only accents change.

```
// Inside the TabBarView, one page per shop.
Theme(
  data: AppTheme.forShop(shop.color, Theme.of(context).brightness),
  child: ProductListView(shop: shop),
)

// The "All" tab gets no wrapper — it stays neutral.
ProductListView(shop: null)
```

TAKES THE SHOP COLOUR	STAYS NEUTRAL, ALWAYS
Selected tab pill, shop dots	Primary buttons (ink / white)
Check-circle fill in that tab	Body and title text
Focused input border	Backgrounds and surfaces
FAB, refresh indicator, progress line	Dividers, borders, snackbars
Empty-state illustration tint	Destructive red

The **All** tab, onboarding, settings and every dialog use the neutral default — no seed, no tint.

04 — TYPE

Nine styles, no more

SPECIMEN	TOKEN	SIZE / WEIGHT	WHERE
One list.	`largeTitle`	28 / 700	Welcome headline
Weekly Groceries	`screenTitle`	26 / 700	Screen and step titles
Chocolate spread	`sheetTitle`	22 / 700	Bottom-sheet titles
Albert Heijn	`bodyStrong`	16 / 600	Card rows, buttons
Bananas	`body`	16 / 400	Product names, list rows
This is how your household…	`secondary`	15 / 400	Subtitles, sheet body
Colruyt · 3	`label`	14 / 400–600	Tab pills, chips, actions
x6 · Active 4 min ago	`caption`	13 / 400–600	Quantities, meta, errors
DONE · 3	`eyebrow`	12 / 700 mono	Section headers
8 F 3 K 2	`codeLarge`	20 / 600 mono	Invite codes

All of these are already mapped onto `TextTheme`, so `Theme.of(context).textTheme.bodyLarge` gives you the product-name style with the right colour for the current mode. Reach for `AppTextStyles` directly only when you need a style on a coloured ground.

05 — SHAPE & METRICS

Radii, sizes, spacing

RADIUS	PX
`sheet` – bottom sheets	24
`celebration` – raised card	20
`card` / `button`	14
`input` / `snackbar`	12
`pill` – tabs, chips, avatars	full

SIZE	PX
Check circle	22
Shop dot – row / picker	7 / 14
Avatar – header / profile	32 / 52
Button height	52
Minimum tap target	44

Spacing: 20 px horizontal screen padding everywhere, 12 px between sibling controls, 13 px vertical inside a product row, 30 px bottom padding inside sheets. Use flex gaps, not margins.

06 — COMPONENTS

What each widget maps to

IN THE DESIGN	FLUTTER WIDGET	NOTES
Primary CTA	`ElevatedButton`	Ink / white in both modes; full-width, 52 px
Secondary CTA	`OutlinedButton`	Keep list, Copy link, Share
Text action	`TextButton`	Skip, Clear checked; red variant for destructive
Text field	`TextFormField`	Label is a plain `Text` ABOVE the field — never `labelText`
Shop tab strip	`TabBar` + `TabBarView`	Blank indicator; each tab draws its own pill. The + sits outside the bar
Product row	`InkWell` + `Row`	Not `ListTile` — the slots don't fit the dot + circle layout
Swipe to delete	`Dismissible`	End-to-start only, 0.4 threshold, undo snackbar
Reorder	`ReorderableListView`	Within one shop tab only
Bottom sheet	`showModalBottomSheet`	Drag handle comes from the theme — don't hand-build it
Side nav	`Drawer`	272 px, square edge, no elevation tint
Dashed "add" tile	`DottedBorder` + `InkWell`	Only third-party dependency in the system
Quick-add bar	Custom `FloatingActionButton` slot	Full-width pill, `centerFloat`, dot tinted to active shop

Product row – reference implementation

```
InkWell(
  onTap: () => onOpenItem(item),
  child: Padding(
    padding: const EdgeInsets.symmetric(vertical: 13, horizontal: 4),
    child: Row(children: [
      GestureDetector(
        onTap: () => onToggleChecked(item),
        child: AnimatedContainer(
          duration: AppMotion.duration(context, AppMotion.bouncy),
          curve: AppMotion.curve(context, AppMotion.pop),
          width: 22, height: 22,
          decoration: BoxDecoration(
            shape: BoxShape.circle,
            color: item.checked ? theme.colorScheme.primary : Colors.transparent,
            border: item.checked
                ? null
                : Border.all(color: theme.dividerTheme.color!, width: 1.5),
          ),
          child: item.checked
              ? Icon(Icons.check, size: 12, color: theme.colorScheme.onPrimary)
              : null,
        ),
      ),
      const SizedBox(width: 12),
      Container(width: 7, height: 7,
        decoration: BoxDecoration(shape: BoxShape.circle, color: item.shopColor)),
      const SizedBox(width: 12),
      Expanded(child: Text(item.name, style: theme.textTheme.bodyLarge)),
      Text('x' + item.qty.toString(), style: theme.textTheme.bodySmall),
    ]),
  ),
)

// Checked rows: wrap the whole row in Opacity(0.45) and draw the
// strike-through with a CustomPainter so it can animate.
```

07 — MOTION

Six timings

TOKEN	MS	CURVE	USED FOR
`micro`	120	`easeOut`	Press states, opacity flips
`quick`	180	`easeOutCubic`	Chip selection, tint, dismissals
`standard`	260	`easeOutCubic`	Tabs, drawer, list reflow
`bouncy`	340	`easeOutBack`	Check fill, new row, FAB
`sheet`	380 / 220	`easeOutQuint` / `easeInCubic`	Bottom sheets in / out
`celebrate`	900	spring 180 / 14	List-complete card only

The rule that gives the app its character: **overshoot only what the user did.** Their own taps get `easeOutBack`; remote edits, syncing and loading stay on plain `easeOutCubic`. `AppMotion.duration(context, …)` already honours the OS reduce-motion setting.

08 — HOUSE RULES

Do / don't

Do

Read colour from `Theme.of(context)`, never a literal hex in a screen.
Put the shop colour on the accent, the list content in ink.
Give every destructive action an undo, except deleting a list.
Show structure while loading — skeletons, not spinners.
Let the user shop offline; sync is the app's problem.

Don't

Don't tint the whole app to the shop colour — only accents.
Don't name shop colours after retailers in code.
Don't use `labelText`; labels sit above the field.
Don't animate remote changes while the user is mid-gesture.
Don't add a radius, duration or grey that isn't in this document.
